There is a massive paradigm shift
going on in the world of search

No click searches are increasing

The customer journey starts with a question; consumers expect answers

The role of search is changing

Traditional search framework

In the age of information, this
is a one dimensional strategy

Providing useful results to users

	Factor 1	Factor 2	Factor 3	Factor 4	Factor 5	Total
Website 1	1	4	6	3	9	648

The Jason Barnard Theory

Providing useful results to users

	Factor 1	Factor 2	Factor 3	Factor 4	Factor 5	Total
Website 1	1	4	6	3	9	648
Website 2	2	7	8	2	4	896
Website 3	5	9	2	3	1	270
Website 4	6	1	3	9	2	324

The Jason Barnard Theory

Providing useful results to users

Position	Website	Bid
1	Website 2	896
2	Website 1	648
3	Website 4	324
4	Website 3	270

The Jason Barnard Theory

Providing useful results to users

Primary Position	Website	First Bid	Second Bid	Final Position
1	Website 2	896	627	1
2	Website 1	648	192	4
3	Website 4	324	519	2
4	Website 3	270	297	3

The Jason Barnard Theory

Providing useful results to users

Position	Web	Image	Snippet	News
1	627	583	787	438
2	519	468	551	275
3	297	235	397	195
4	192	172	257	164

The Jason Barnard Theory

Providing useful results to users

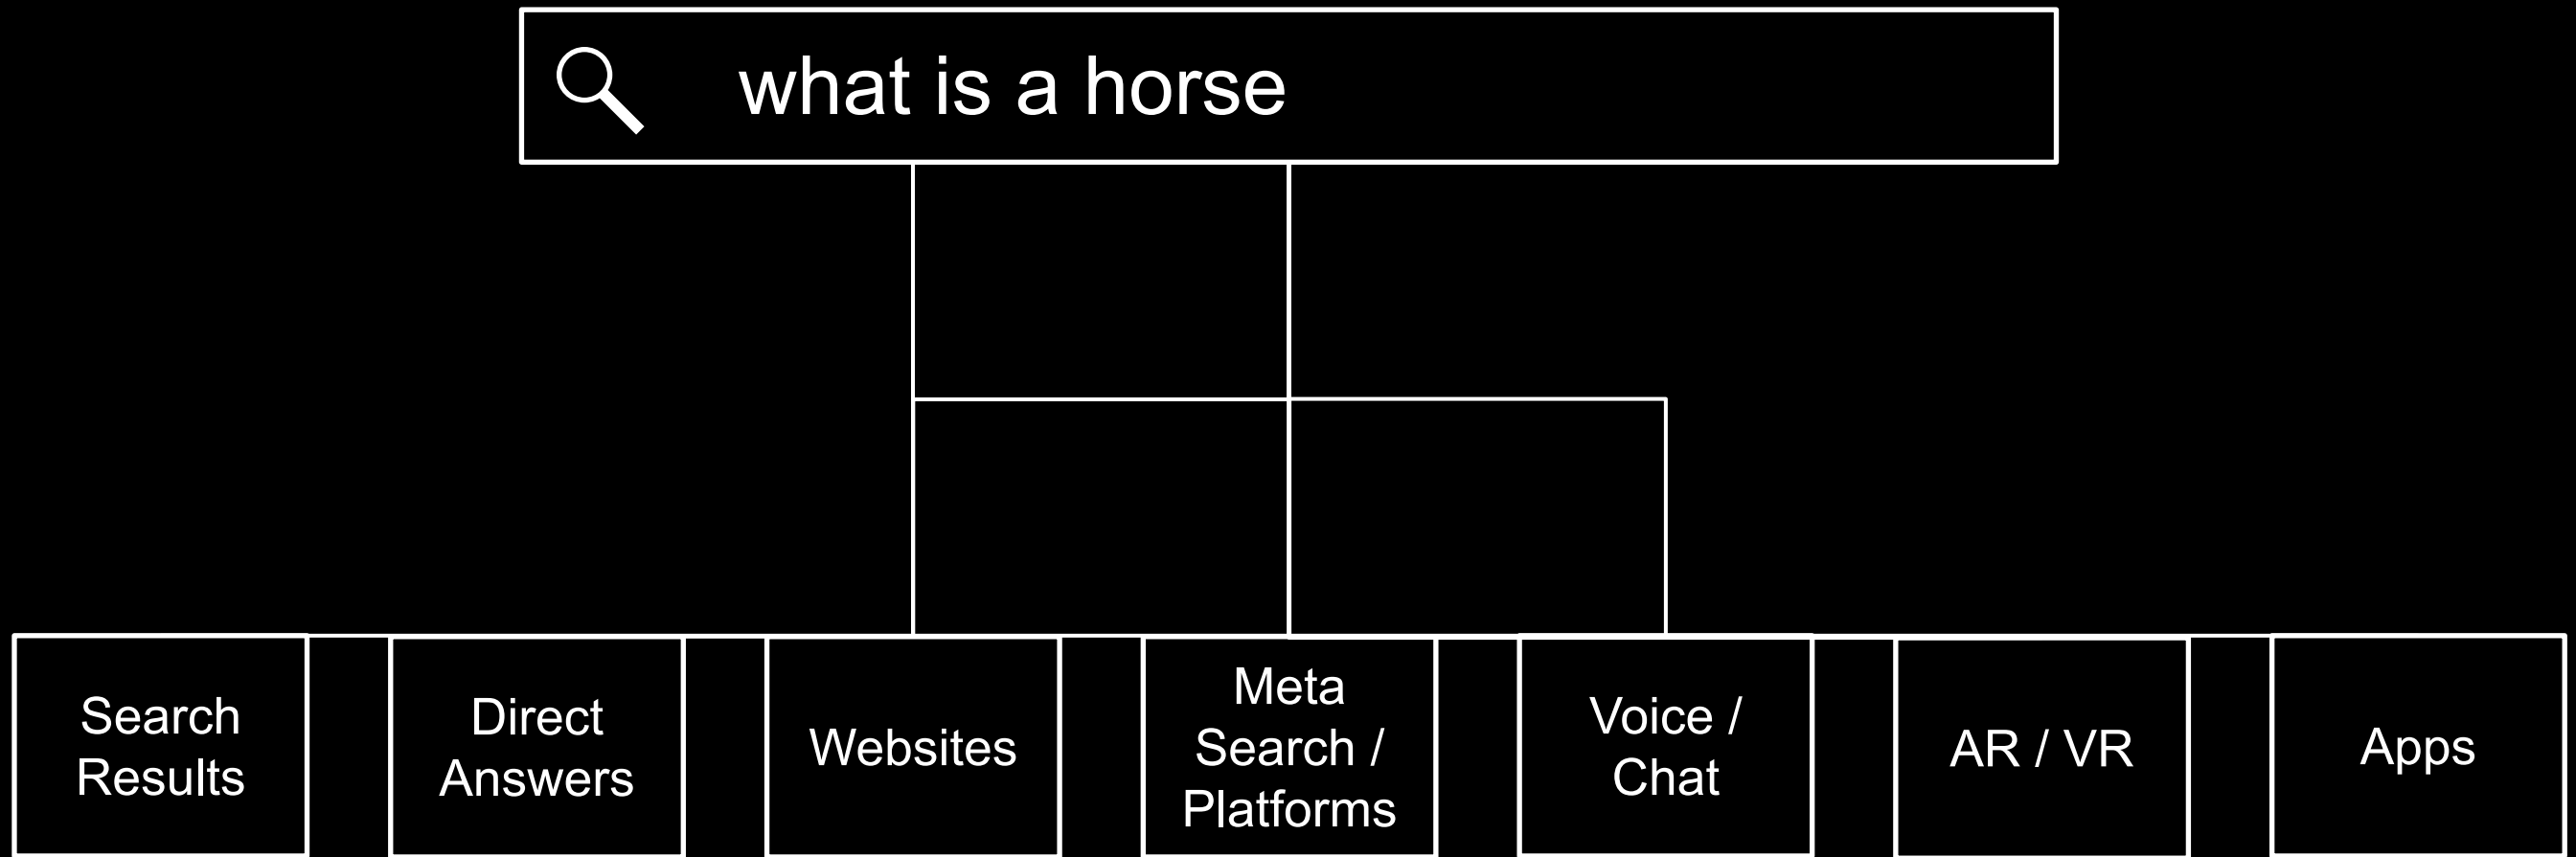

Position	Web	Image	Snippet	News
1	627	583	787	438
2	519	468	551	275
3	297	235	397	195
4	192	172	257	164

The Jason Barnard Theory

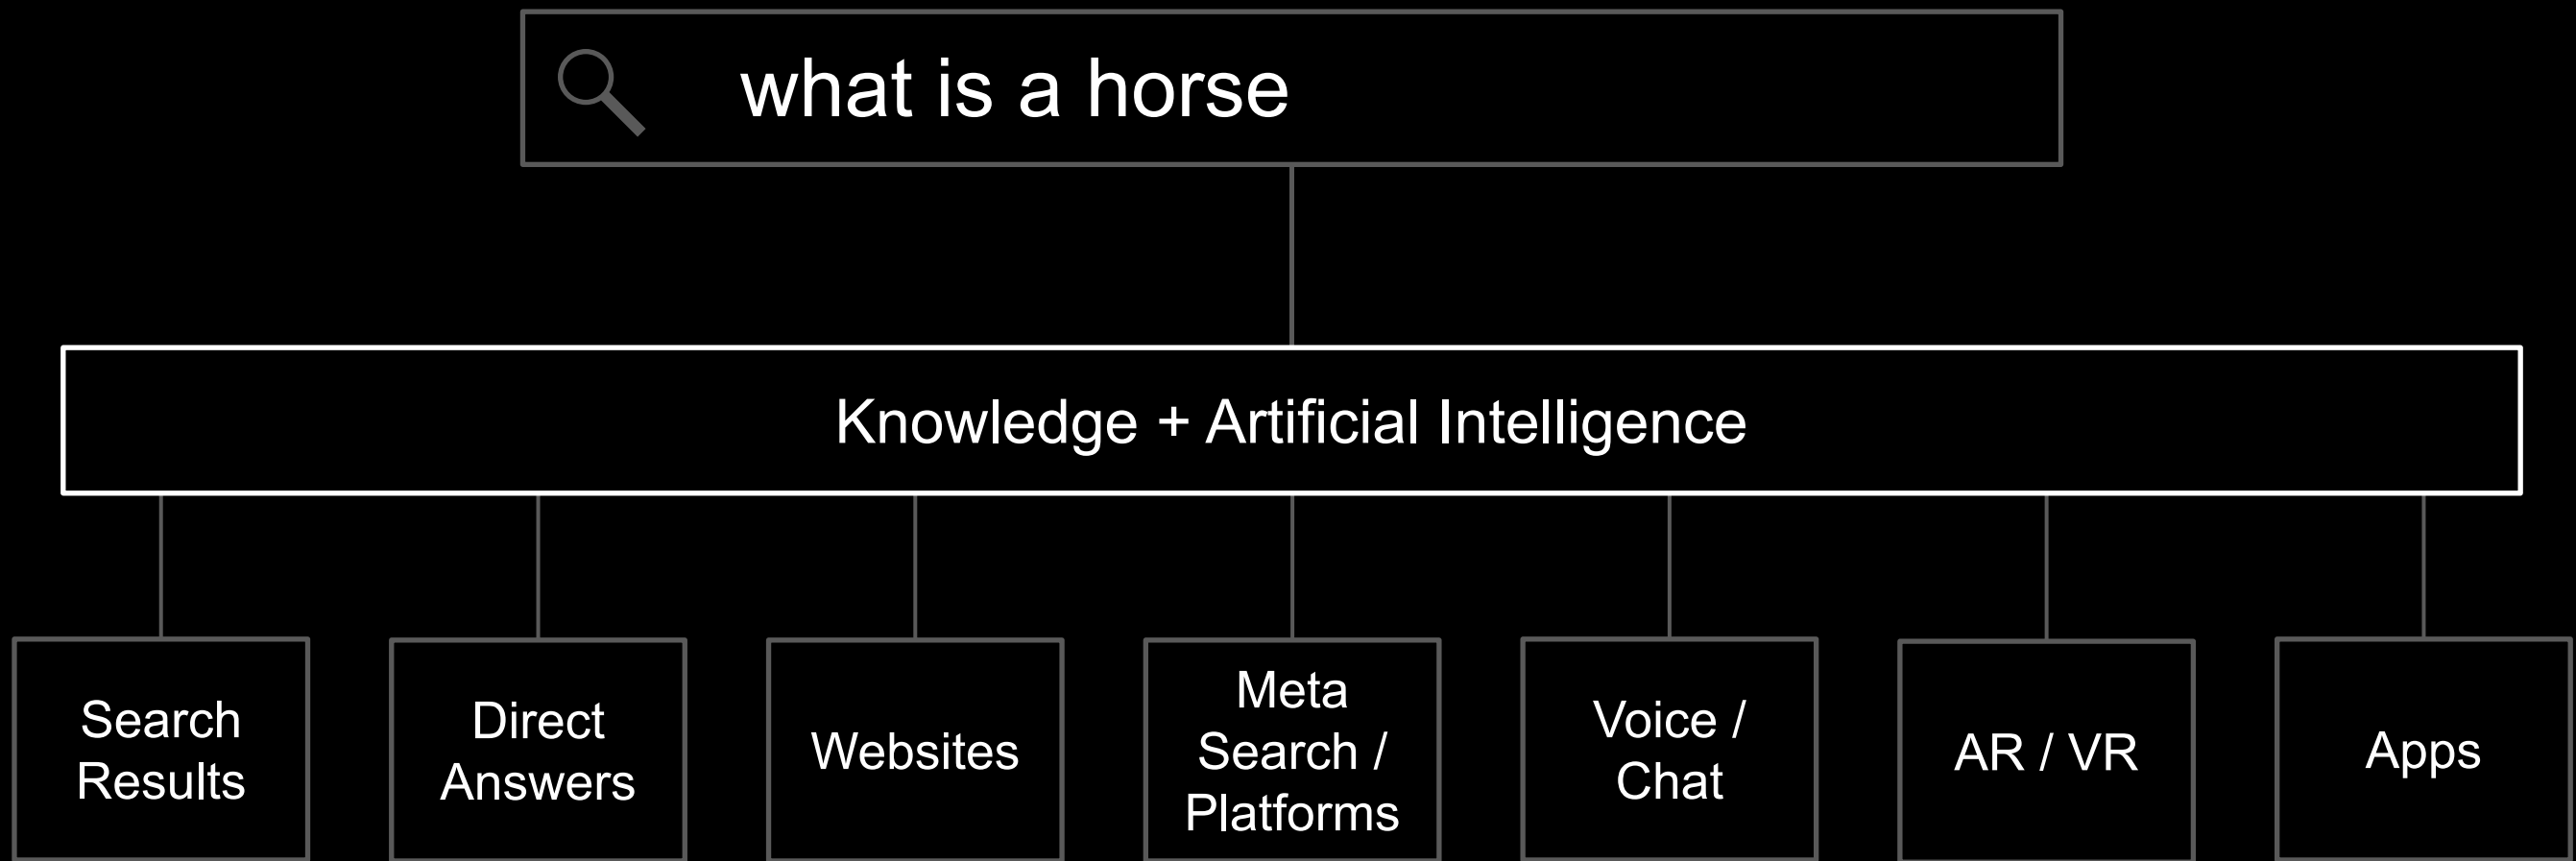

This tells us about “how” an input is assessed, but not what the input is

Search is more than your website

Search is more than your website

An algorithm is the set of specific instructions that facilitates action

How a network works – your brain

Neurons (brain cells) connect to create a network

The connections (“synapses”) talk via chemical signals

How a network works – your brain

When a response
is required a cell is
“activated”

It passes a positive
charge to other cells who
may do the same

How a network works – your brain

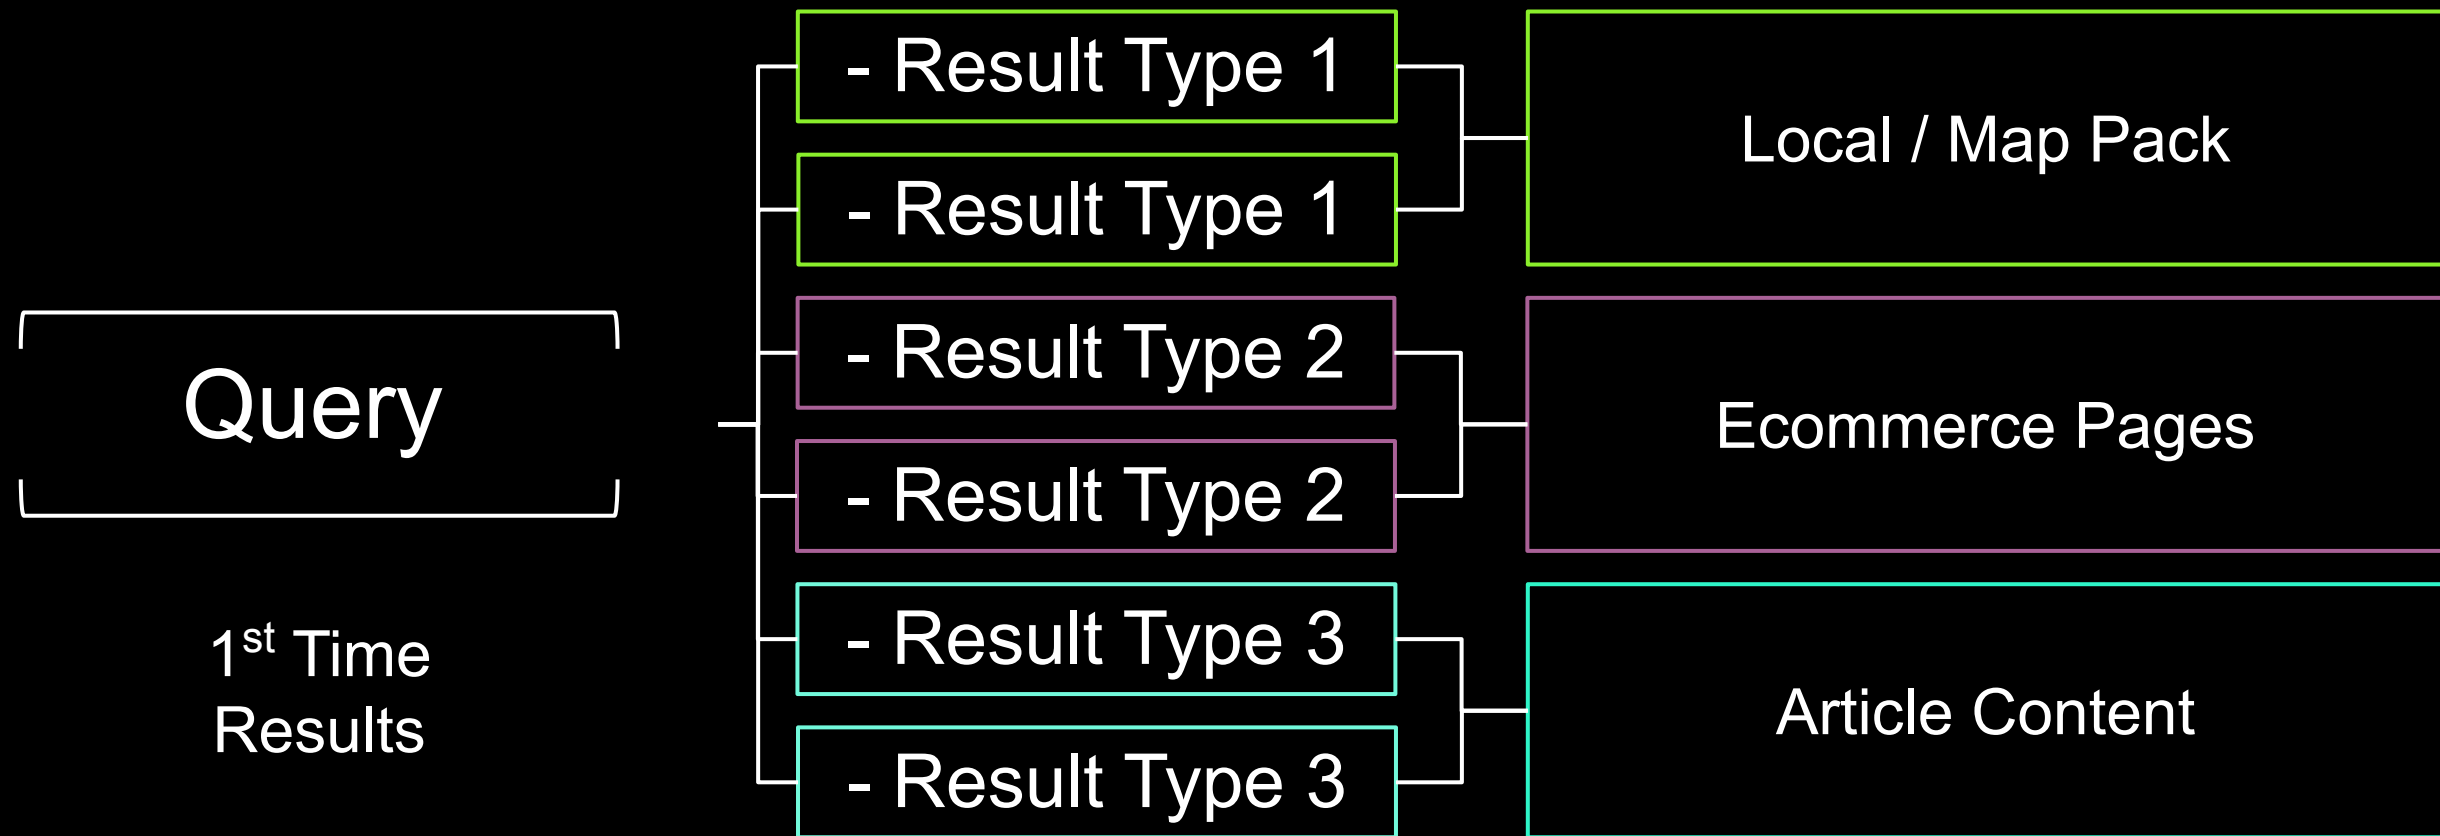

Some cells need
a certain level of
charge to activate

When enough cells
activate together,
something happens

We can use networks to predict intent
and serve relevant results

A possible flow for learning intent

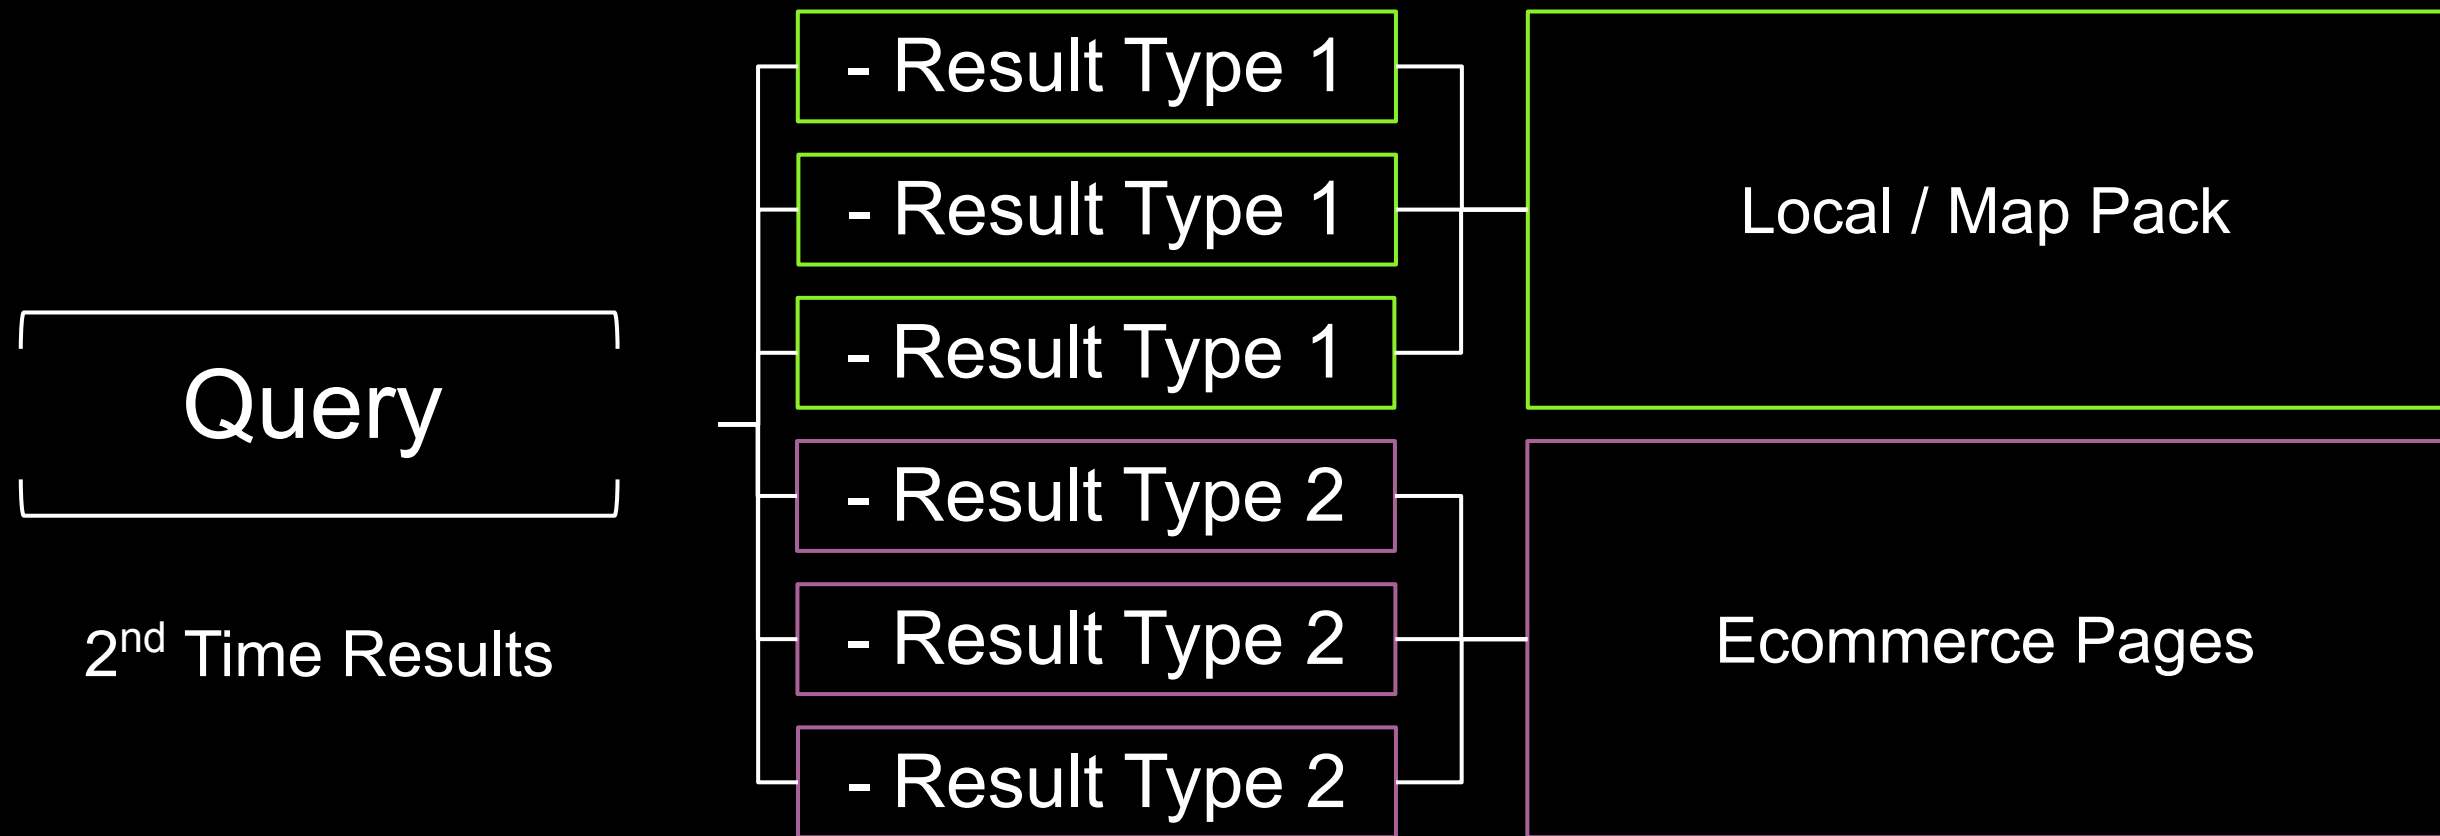

A possible flow for learning intent

		Clicks	Bounces	B / C*
		*	*	
Intent Scoring	- Result Type 1	520 1	25 6	5 %
	- Result Type 2	4329	29 7	7 %
	- Result Type 3	106 3	49 1	46 %
	Average based on similar “high confidence” pages	3956	324	8 %

*Metrics chosen to illustrate the process, not representative.

A possible flow for learning intent

Sequence iterates until the search results yield a high confidence outcome

The information that provides intent
comes from the web as a whole

Understanding words on a page

$$\text{Term Frequency (TF)} \quad / \quad \text{Inverse Document Frequency (IDF)}$$

(Disclaimer: Google uses more complex methods,
but this is useful to understanding the concept)

Understanding words on a page

Term
Frequency (TF)

/

Inverse Document
Frequency (IDF)

The number of times a word
appears in a piece of text

(Disclaimer: Google uses more complex methods,
but this is useful to understanding the concept)

Understanding words on a page

Term
Frequency (TF)

/

Inverse Document
Frequency (IDF)

The importance of that word in
the overall document

(Disclaimer: Google uses more complex methods,
but this is useful to understanding the concept)

Understanding words on a page

A bank generally refers to the land alongside a body of water. Different structures are referred to as banks in different fields of geography, as follows. In limnology, a stream bank or river bank is the terrain alongside the bed of a river, creek or stream.

A bank is a financial institution that accepts deposits from the public and creates credit. Lending activities can be performed directly or indirectly through capital markets. Due to their importance in the financial stability of a country, banks are highly regulated.
